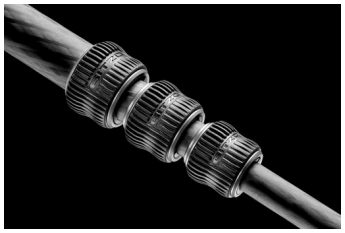
Traveler tripods and monopod

Traveler Tripods, with the 180° leg folding mechanism pioneered by Gitzo, are now even stronger with the state of the art “Carbon eXact” tubes.
“Traveler G-lock”, a new leg lock system dedicated for Traveler Tripods, is compact but strong and ergonomic.
The new range is available in 4 sizes, as legs only, or as kits (tripod+head) featuring the new Center Ball Heads for ultimate smoothness and precision. The slimmest Series 0 is added to the Traveler family for the first time, while the Series 1 and 2 models have become taller than their predecessors.

BENEFITS AND FEATURES

Carbon eXact – stronger legs
Carbon eXact tubes are stiffer than the predecessors’ Carbon 6X tubes, as they include HM (High Modulus) carbon fibre, and have larger tube diameters. For example, the lowest leg section of the Series 1, 5 section tripod has a diameter of 11.2mm; 40% larger than the predecessor.



Traveler G-lock – space saving and ergonomic
Traveler G-lock is a new, compact leg lock system dedicated to Traveler Tripods.
Its space efficiency makes it possible to have taller tripods with compact folded lengths.
The new, curved external form gives good grip, while the internal O-ring achieves softer operation and reduces dust and grit entering the locks.

Tripod Kits with new Center Ball Heads
The head is smooth, precise, and perfectly fits between the folded legs.
All tripod models are available as Kits with head, or without the head. The head in Kits can be easily removed and replaced with other heads.

Other features for ease of use

- Short column included for faster switching to ground level position
- New feet for Series 0&1 models – space saving, stable, and easy to replace in case they get worn out. The feet for Series 2 are interchangeable with optional feet.
- Shoulder strap included – convenient switching between carrying and shooting

Series 0. (top leg ø: 21.7mm)
The slimmest Series 0 is added to the Traveler family for the first time. With its slim leg tubes, it is the lightest Traveler tripod, but thanks to the stiff Carbon eXact tubes it is surprisingly rigid. A 4-section tripod with short closed length and short extended height.

Series 1. (top leg ø: 25.3mm)
Series 1 has the perfect balance between lightweight when carrying, and height and rigidity when shooting.
The 5 section Traveler has a superb height / closed length ratio.
The 4 section Traveler is much taller than its predecessor thanks to the space efficient Traveler G-lock.

Series 2. (top leg ø: 29.0mm)
Series 2 has the largest tube diameters among Traveler tripods. It is ideal for photographers using longer lenses or requiring the highest stability. The feet are interchangeable with Gitzo's optional feet, such as spikes and large feet. A 4-section tripod, much taller than its predecessor thanks to the space efficient Traveler G-lock.
